(Officer In-charge)

- TMS is a valuable tool for metabolic screening, however confirmatory test is needed for any initial positive screening results
- Screen negative* result does not completely rule out the possibility of a disorder.
- Different clinical and sample condition (prematurity, transfusion, parenteral nutrition, medications, collection timing, or improper sample handling etc) may affect the result.
- Interpretation of results should always be done in conjunction with the clinical condition of the patient and with health care provider
